“Capture”

The Capture function of EndNote Web can be a very useful tool when crafting a bibliography from a wide-range of online sources.

Note: **You must turn off the *Pop-up Blocker in I.E. Explorer in order for Capture to work!**

To use Capture:

1. Open EndNote Web.
2. Locate and open the online source.
3. Click on the Capture button in the toolbar.

This will create a basic bibliographic citation.

EndNote Web is compatible with many of our research databases. If you use one of the resources listed below and follow the simple steps, you will see that the resulting citations are much more detailed – and in some cases, the annotations are also imported into EndNote Web.
